

Introduction

Inter-Global is proud to introduce our new catalog design. We have created a format which we feel enhances the experience of browsing through our product offerings.

This change has allowed us to simplify the catalog into three (3) main sections:

Proprietary

- Design
- Engineering
- Manufacturing

Electrical Components

- Fluorescent Ballast
- GU24, HID & Incandescent Sockets
- Photo cells & Convenience Outlets

Fixtures

- Indoor Fixtures
- Outdoor Fixtures
- Subassemblies

We have also reduced over 65% of the paper used in our catalog for our ongoing commitment to **“GO GREEN”** and protect the environment. At the same time we have continued to add innovative designs to our product line.

Inter-Global offers a wide selection of electrical components, ballasts, and fixtures. In addition we have added energy-saving electronic fluorescent products including GU24 fixtures and sockets.

Our redesigned catalog also includes a CD which compliments the new format and includes additional information, specifically, our fixture explosions, components, and special order sections.

As always, product information is available electronically via the web at www.interglobal-inc.com.

Product information for our subsidiary, Crown Plastics, Inc., is also available on the CD and electronically as well. Visit them online at www.plasticglobes.com for more information.

We hope that you join us in our **“GO GREEN”** effort and welcome the new format. Please contact us if you have any questions.

Best regards,

Larry Glazer
President
