

Proprietary Manufacturing

Proprietary Manufacturing

Inter-Global has over thirty years of experience working with customers in the lighting and electrical industries developing new products.

Electric Sockets
Magnetic & Electronic Ballasts
Durable Plastic Fixtures & Components
Injection & Blow Molding
Extrusion Molding
Metal Fabrication
Tooling

Additional Capabilities

- New Product Development
- Design & CAD
- Modification & Redesign
- UL/CUL Certification
- Manufacturing
- Importing
- Packaging & Graphic Design
- Warehousing
- Distribution & Fulfillment

We provide you with valuable support every step of the way. Inter-Global is the solution partner you have been looking for. Contact us today.

Experience at Your Fingertips

New Product Development

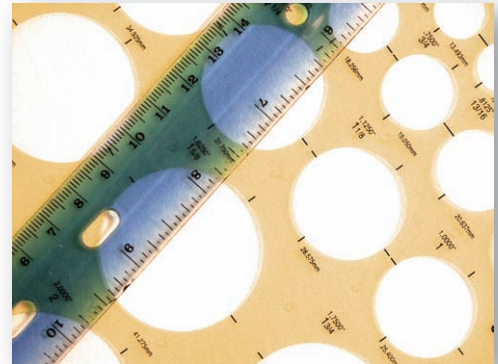

Inter-Global has over thirty years of experience introducing new products. If you have an idea for a product, our engineers and designers work with you to bring the concept to reality.

Design & CAD

Once the idea is formulated, Inter-Global helps create a design of the actual physical product. By explaining what you want made, a Solid Works or Auto Cad drawing provides you with the first “blueprint” vision of your product via engineered drawings.

Modification & Redesign

If you have a product, but have discovered that things should have been done differently, Inter-Global will help you with adjustments, revisions, changes or new features. Inter-Global looks for cost efficient ways to modify your product needs without sacrificing quality.

Tooling

Inter-Global oversees the tooling development for various types of finished products ranging from metal and plastics to glass products. Based on the type of material selected for the final product, Inter-Global has expertise in multiple tool building categories including injection, injection-blow, extrusion-blow, blow, die cast, sand cast, and metal stampings.

UL/CUL Certification

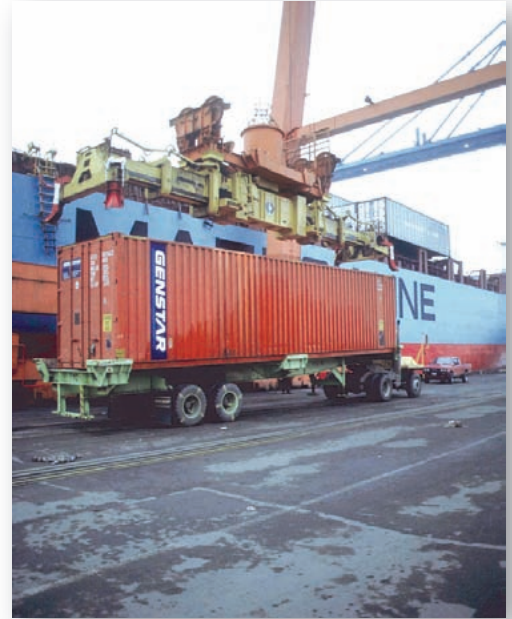

Inter-Global can assist in the UL/CUL certification process by submitting your product for safety evaluations, working through the various processes and stages for certification. The UL/CUL marks are the most accepted, trusted and recognized safety certifications.

Manufacturing

Inter-Global has manufacturing facilities both domestically and in the Far East. Each factory focuses in its own specific area of expertise, providing service and efficiency in producing products according to the client's specifications. Production and product delivery timelines are monitored every step of the way.

Importing

Upfront planning and strategy ensures maximum container usage. Three decades developing first-hand knowledge and expertise has given Inter-Global the infrastructure to import containers at competitive prices, to follow complete customs controls, and breakdown partial or full containers to be reshipped per the customers direction.

Packaging & Graphic Design

Quality packaging and marketing materials are essential in today's crowded marketplace. The packaging must complete the selling job with interest-building information and graphics. Inter-Global works with you to develop a complete group of sales tools to promote your product.

Warehousing & Distribution

The cycle is complete when the product goes through the shipping stage and leaves the warehouse. Inter-Global controls the distribution and logistics processes, shipping products directly to your customers, according to your guidelines.
